## EXPERIENCE

**KINTERRA**, Remote

**12/2025 - 04/01/2026**

### Product Engineer

- Built and deployed a production-grade AI SaaS platform independently (Next.js, PostgreSQL + pgvector, OpenAI), supporting 800+ AI-assisted interactions per month; designed full-stack system including schema architecture, embedding strategy, analytics engine, OAuth integrations, and deployment pipeline.
- Architected a relational + vector identity modeling infrastructure separating LLM-based semantic extraction from deterministic algorithms to enable structured, queryable, and explainable AI outputs.
- Designed longitudinal identity data and internal tool-based API infrastructure enabling LLM agents to access structured system data (read-only graph queries), establishing the foundation for future personalized next-best-action model training and autonomous write-capable workflows.

**UKG**, Lowell, MA

**05/2025 - 08/2025**

### Product Manager Intern

- Led redesign of an AI-powered enterprise feedback intelligence system integrating Vertex AI to structure and surface insights across multiple customer channels; transformed fragmented analytics workflows into a unified decision tool adopted by PMs across the organization.
- Increased active usage by 340% within five weeks by improving signal quality, filtering logic, and usability, enabling product teams to identify actionable themes by product, cohort, and release cycle.

**LUCA**, Santa Cruz, CA

**05/2021 - 02/2023**

### Founder

- Launched a B2B2C wellness coaching platform, securing a \$10K pilot within three weeks, reducing student anxiety by 39%, and driving 79% week-over-week growth through strategic partnerships with coach training organizations.

**FREEDOM ROBOTICS**, San Francisco, CA

**02/2021 - 05/2021**

### UI/UX Designer

- Designed an enterprise-grade user management and role-based access control system for a YC-backed robotics platform, translating complex fleet automation and integration workflows into secure, scalable UI patterns inspired by AWS and Stripe.

**CATO**, Milpitas, CA

**07/2018 - 08/2020**

### Technical Product Manager

- Owned product strategy and system architecture for an AI-driven, policy-based power orchestration platform that dynamically reallocated energy across data center racks, improving cost efficiency and outage resilience for enterprise customers.
- Led cross-functional hardware and software teams to deliver a \$200K proof-of-concept into live production within an Equinix testing facility; defined ML-to-UI workflows, authored functional and non-functional specs, and shipped the system from concept to deployment in 3 months.

## EDUCATION

**UC Irvine**, Irvine, CA

**06/2026**

MBA - Product Strategy and Analytics

**University of Cambridge**, Cambridge, UK

**03/2015**

Research Intern - Prosociality and Well-Being Laboratory

**UCLA**, Los Angeles, CA

**06/2014**

BA, Psychology

Cum Laude | Departmental Honors | Published Research
